MOLASSES MARKET NEWS - ANNUAL SUMMARY

HIGHLIGHTS OF 1965

Molasses prices followed a fairly steady trend during 1965 but their general level was somewhat below that of the previous year. Molasses prices were lower in relation to corn prices than at any time in the past 10 years. The 613 million gallons of molasses available for feed and industrial use in the United States was 4-1/2 percent smaller than in 1964. Nearly 60 percent of the supply came from domestic sources. Mainland production once again comprised a larger percentage of the total supply than imported molasses. U. S. imports of foreign molasses reached 268 million gallons -- a little more than the previous year. Exports of molasses from the United States were relatively small and sharply below a year earlier. Feed and industrial use of molasses ran about 28 million gallons less than in 1964.

PRICES

Cane Molasses

Prices of cane molasses held relatively steady at most of the principal markets during 1965. However, the general level of prices averaged 2-3/4 to 4-1/3 cents per gallon below 1964. It also was at the lowest point in five and a half years or longer at many terminals. Abundant supplies were a major price-depressing influence.

Weakness was more pronounced in the East and Midwest than in the Gulf area or on the West Coast. Competition was very keen in the East. Sellers in this area were forced to make price concessions on refiners' blackstrap and imported molasses in order to compete with volume discounts and freight equalization rates given on southeastern and Florida molasses.

While the general level of prices for 1965 was off around 3-1/2 cents on an average, the year's closing prices were not down nearly as much. In fact, the markets actually closed firm to about a penny higher in the Gulf, Southeast, and at most midwest terminals. Cane molasses finished only about a cent per gallon lower on the West Coast and in the Southwest. In the East, however, prices ran 2 to 2-1/2 cents below 1964's closing levels.

Molasses prices followed a fairly uniform trend at most markets during 1965. They either held firm or strengthened gradually during the first five or six months of the year. There was a weaker undertone in the market for the next month or two when demand was seasonally low. Then, demand improved with the advent of the fall feeding season and prices resumed a steadily firming course for the balance of the year. Eastern markets were the major exception to this general price trend. Prices in this area declined gradually throughout most of the year. It was not until the final month or two of 1965 that prices in the East showed any strength.

The price relationship previously existing between the New Orleans market and Texas Gulf port terminals and eastern markets was somewhat different from most other recent years. Normally, prices at Texas Gulf and eastern points follow the trend of New Orleans prices. In 1965, however, Texas Gulf terminals

MOLASSES PRICES

F.O.B. Tank Car, New Orleans

sold molasses at one price throughout the year regardless of the trend taken by the New Orleans market. This reflected to a large extent the practice of selling on a contract basis at Texas Gulf terminals. As stated earlier, price trends in the East were dominated more by competition from the Southeast and Florida than by what happened on the New Orleans market.

Beet Molasses

Prices of beet molasses, like cane molasses, displayed a generally steady trend throughout 1965. However, the general level of trading was below that of 1964. This was particularly true during the first seven months of the year. Average prices for 1965 were down \$5.38 per ton in the Colorado-Wyoming-Montana area, \$3.57 in the Denver area, and \$3.05 in the Oregon-Utah-Idaho-Missoula, Montana area. Ready availability of beet molasses and the lower market for cane molasses were weakening influences.

While the general level of beet molasses prices was down for the year, closing levels were not much different from a year earlier in most areas. At Denver, the ending price was \$2.00 per ton above the average of December the year before. Month-to-month price changes were very limited, reflecting the wide practice of selling a large share of beet molasses on seasonal or yearly contracts.

Citrus Molasses

Citrus molasses prices declined steadily during the first half of 1965, firmed up a little the next five months, and then turned downward again in the final month of the year. Although the closing level of prices was only \$4.75 per ton below the previous year, 1965's average price of citrus molasses fell off about \$10.00 per ton.

Production of citrus molasses almost doubled in 1965, and this exerted a certain amount of pressure on the market and prices. So did competition from cane molasses, particularly among cattle feeding outlets. Even though alcohol distillers normally take about two-thirds of the citrus molasses produced annually, producers had to make some price concessions in order to move 1965's large output.

Corn (Hydrol) Molasses

Prices of corn molasses showed the same general trend as other types of molasses. Prices averaged \$5.25 to \$6.00 per ton lower for the year at principal markets, but closing levels ran 75 cents to \$1.25 per ton above the year before. Month-to-month price changes were relatively minor as reflected in the overall stability of the market during 1965.

As in other recent years, the comparatively high cost of corn molasses in relation to other types of molasses resulted in less corn molasses going into feed use and more being taken by various manufacturing outlets, especially the pharmaceutical industry.

MOLASSES AND CORN PRICES

The relationship between the cost of corn and the cost of molasses favored molasses more in 1965 than in 1964. 1/ In fact, molasses was in the best price position in relation to corn that it has been in during the past 10 years.

The cost of 6-1/2 gallons of molasses dropped 23.1 cents in New York, 22.6 cents in Chicago, and 22.5 cents in Kansas City. Meanwhile, the cost of a bushel of corn went up two-tenths of a cent in New York, 5.1 cents in Chicago, and 2.9 cents in Kansas City.

Thus, 1965 molasses costs averaged about 70 cents below the cost of corn in New York, nearly 42 cents less in Chicago, and 39 cents lower in Kansas City.

1/ A "rule of thumb" measure -- 6 1/2 gallons of molasses are about equivalent in carbohydrate value to one bushel of corn -- is widely used to compare the carbohydrate value of molasses and corn. This measure is based on experiments conducted to evaluate the energy produced from one bushel of corn and the amount of molasses required to produce the same amount of energy.

SUPPLIES

Molasses supplies available for feed and industrial use in the Continental United States during 1965 were estimated at nearly 613 million gallons. This was some 28 million gallons, or about 4-1/2 percent, less than the previous year. Production of cane, beet, and hydrol molasses dropped off. Output of refiners' blackstrap molasses was about on a par with the year before, while production of citrus molasses almost doubled 1964's outturn. Although mainland production was down, it comprised for the third consecutive year a larger percentage of the total available supply than imported molasses.

Domestic Supplies

Some 347 million gallons of molasses -- nearly 57 percent of the total available U. S. supply -- was provided by domestic sources in 1965. This was almost 32 million gallons, or 8-1/2 percent, below the record 379 million gallons coming from domestic sources in 1964. Mainland production accounted for 278 million gallons of the 347-million-gallon domestic supply. The other 69 million gallons were shipped to the mainland from Hawaii and Puerto Rico.

Production of cane molasses by mainland sugar mills in 1965 was estimated at 86 million gallons. This was nearly 17 percent less than the record 103 million gallons produced the previous year due mainly to the smaller sugarcane acreage harvested. Beet molasses production was estimated at 112 million gallons -- about 10 percent less than the year before. Here, too, the decline was due largely to a reduction in acreage because sugar beet yield per acre was about the same as the previous year. Output of refiners' blackstrap molasses totaled around 45 million gallons, only slightly less than the year before. Production of citrus molasses reached 8.6 million gallons. This was almost twice as much as in 1964, with the increase due to the larger citrus crop. Production of hydrol molasses stood at nearly 27 million gallons, or about 11 percent less than a year earlier.

Hawaii produced a record-breaking 58.3 million gallons of molasses in 1965. This was some 600,000 gallons larger than the previous year's record and reflected the all-time high sugarcane production in Hawaii. Shipments from Hawaii to the mainland totaled just under 52 million gallons -- almost 780,000 less than in 1964. No Hawaiian molasses was exported to foreign countries for the sixth consecutive year. Molasses production in Puerto Rico in 1965 was estimated at about 57 million gallons -- some 7 million gallons, or 11 percent, less than in 1964. Shipments of an estimated 17 million gallons to the mainland ran slightly under the previous year's rate, while exports of 6.8 million gallons to foreign countries were only a third as large as a year earlier.

Imports

Molasses imported into the Continental United States from foreign countries during 1965 totaled 268 million gallons -- about 1.6 million gallons more than the year before.

Mexico remained the largest foreign supplier of molasses to the United States. Imports from Mexico totaled a record-breaking 95.6 million gallons, 9.2 million gallons or nearly 11 percent more than the previous year. Mexican

molasses also accounted for better than a third of the total molasses imported into this country during 1965. The Dominican Republic also shipped more molasses to the United States in 1965 than the year before. Imports from the Dominican Republic amounted to more than 41 million gallons -- some 8 million gallons, or almost 27 percent, greater than in 1964.

Imports of molasses from other foreign countries showed several significant changes in 1965. Such regular suppliers as Jamaica, Mauritius, Peru, and the Philippines shipped considerably less molasses to the United States than they did in 1964. Imports from Haiti, Trinidad and Tobago, France, the Republic of South Africa, and Australia also dropped measurably. On the other hand, a much greater quantity of molasses was imported from Ecuador and Taiwan. Indonesia shipped a substantial amount of molasses to this country for the first time in several years. Imports from British Guiana, British Honduras, Guatemala, Mozambique, and Nicaragua registered moderate gains, too.

Three customs districts -- New Orleans, Galveston, and New York -- got nearly 60 percent of the total molasses imported into the United States during 1965. Although imports into New Orleans went up some 22 million gallons, the quantity imported into the New York and Galveston districts went down about 10 and 3 million gallons, respectively. Molasses imports into Los Angeles -- one of the other large importing districts -- were not much different from the year before. More molasses was imported into the Buffalo, Mobile, and Virginia districts than in 1964, but less molasses came into the Connecticut, Maryland, San Diego, and San Francisco districts.

Almost two-thirds of the molasses imported from Mexico came into the United States through three customs districts -- Galveston, Los Angeles, and New Orleans. Nearly a third of the Dominican Republic's shipments entered this country through New Orleans, and about half of the total was imported into New York, Philadelphia, and Mobile. Most Jamaican molasses came to New Orleans and New York. Most of the molasses imported from Caribbean, Central American, and South American countries entered the United States through Gulf Coast ports. Some molasses from Barbados, British Guiana, and Trinidad and Tobago, however, went to New York customs districts. Another major exception was Nicaraguan molasses. All of it was imported into West Coast customs districts. So was the molasses shipped from the Philippines. Most of the molasses imported from Australia and Taiwan came into Gulf ports, while shipments from Indonesia were divided rather evenly between Gulf Coast, New York, and West Coast customs districts. All of the molasses imported from Europe and Egypt came into the New York district, while the bulk of African molasses went to Gulf Coast ports.

Exports

Some 9 million gallons of molasses were exported from the United States in 1965. This was almost 16 million gallons less than the year before and was the lowest exports have been in many years. Nearly 7 million gallons -- about 73 percent of total U. S. molasses exports -- were exported directly from Puerto Rico. Only 2.5 million gallons were shipped from the mainland to overseas destinations. Most of this was exported through the Washington, Florida, and San Diego customs districts and went to the United Kingdom, the Netherlands, and Canada.

1/ Includes molasses used in making ethyl alcohol, butyl and acetone prior to 1959. 2/ Molasses utilized in feeds is a residual item, calculated by subtracting molasses used industrially from total mainland supplies without considering changes in stocks. 3/ Pharmaceutical utilization not considered prior to 1960. 4/ Estimated.

UTILIZATION

Almost 613 million gallons of molasses were estimated to be available for feed and industrial use in the United States during 1965. This was about 28 million gallons, or around 4-1/2 percent, less than in 1964.

Molasses used in the production of distilled spirits in the Continental United States in 1965 totaled 15 million gallons -- more than twice as much as in 1964 and the most for this purpose since 1960.

About 100 million gallons of molasses -- 10 million more than the year before -- were estimated by the trade to have been used in the manufacture of yeast, citric acid, and vinegar. Pharmaceutical and edible molasses manufacturers used an estimated 50 million gallons, or about 3 million more than in 1964.

Thus, based on the foregoing utilization estimates and not considering actual changes in molasses stocks (which are unavailable), almost 448 million gallons of molasses were available for direct feeding to livestock or in the manufacture of livestock feeds. This was about 50 million gallons less than the previous year and was the least for any year since 1959. (Trade estimates indicate that about 5 percent of the molasses used in livestock feed is converted to dried molasses. Most of this is manufactured and used in the Midwest.)
